PROFILE STATEMENT

Computer science student who builds full-stack JavaScript apps. Built two Node.js/Express backends on third-party REST APIs and run a freelance web business with a client site in production.

EDUCATION

University of Washington Tacoma

Expected Graduation: March 2028

Bachelor of Arts in Computer Science and Systems, Minor in Business

Tacoma, WA

Relevant Coursework: Programming Practicum, Discrete Structures (in progress); Data Structures, Machine Organization (Winter 2027); Algorithms, Software Development & QA (Spring 2027)

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, Python, SQL, HTML/CSS

Backend: Node.js, Express, REST APIs, async/await, caching, rate limiting, dotenv

Frontend & Web: DOM manipulation, responsive CSS, Eleventy, Nunjucks, JSON-LD, Sveltia CMS

Tools & Deployment: Git/GitHub, Netlify (continuous deployment), Render, Cloudflare DNS

EXPERIENCE

Gaspar Web Co

August 2026 – Present

Freelance Web Developer

Tacoma, WA

- Build client sites with Eleventy, deployed on Netlify with an automatic build on every push to main.
- Built brightdetailswa.com for a detailer who only had a Facebook page; added JSON-LD structured data for Google.
- Moved business info hard-coded in 55 places into JSON data files behind a Git-backed CMS (Sveltia) the owner edits from her phone.
- Converted images to WebP and moved the site to a new domain with 301 redirects so old links still resolve.

Thrive Communities

February 2026 – Present

Maintenance Technician

Tacoma, WA

- Fix plumbing, electrical, and appliance issues and triage work orders for apartment residents.
- Work 24 hours a week while taking classes full time.

PROJECTS

ShouldISlab – Calculates whether grading a trading card is worth the cost (shouldislab.com).

- Built a Node.js/Express REST API and vanilla JavaScript frontend, deployed on Render behind Cloudflare.
- Combined CardHedge and GemRate API data into an expected-value model: median sale price per PSA grade weighted by real grade odds, with 95% Wilson confidence intervals.
- Built an in-memory TTL cache (JavaScript Map) to stay under a ~10 requests / 35 s API limit when one result needs up to 7 calls.
- Handled HTTP 429s with a custom error class that fails fast and returns Retry-After; escaped API data to prevent XSS.

ExplainMyCode – Explains pasted code in plain English using the Anthropic API.

- Built an Express backend that proxies requests to Claude so the API key never reaches the browser.
- Added per-IP rate limiting (20 requests / 15 min), input validation (400 on empty or 8,000+ character input), and CORS.

WORK AND COMMUNITY EXPERIENCE

Dick's Sporting Goods – Team Sports Associate

Sept 2025 – Feb 2026

The Goodtimes Project – Volunteer Cabin Staff (pediatric cancer camp)

July 2025

Seattle Mariners Camps – Youth Sports Instructor

June 2023 – Aug 2025

Linfield University – Football Operations Assistant

Sept 2023 – Nov 2024
