## EDUCATION

**University of Washington Tacoma** Expected Graduation: December 2027
***Bachelor of Arts in Computer Science and Systems, Minor in Business Administration*** Tacoma, WA
*Relevant Coursework:* Programming Practicum, Discrete Structures (in progress); Data Structures, Machine Organization (Winter 2027); Algorithms, Software Development & QA (Spring 2027)

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), Java, Python, SQL, HTML/CSS
**Backend:** Node.js, Express, REST APIs, caching, rate limiting
**Frontend & Web:** Responsive CSS, Eleventy, Nunjucks, JSON-LD, Sveltia CMS
**AI-Assisted Development:** Claude Code, Anthropic API (Claude)
**Tools & Deployment:** Git/GitHub, Netlify (continuous deployment), Render, Cloudflare DNS

## EXPERIENCE

**Gaspar Web Co** August 2026 – Present
***Freelance Web Developer*** Tacoma, WA

- Built brightdetailswa.com, the first website for a mobile detailer who only had a Facebook page: Eleventy on Netlify, rebuilt on every push to main, with JSON-LD structured data for Google.
- Moved business info hard-coded in 55 places into JSON data files behind a Git-backed CMS (Sveltia) the owner edits from her phone.
- Converted images to WebP and moved the site to a new domain with 301 redirects so old links still resolve.

**Thrive Communities** February 2026 – Present
***Maintenance Technician*** Tacoma, WA

- Plumbing, electrical, and appliance repairs and work-order triage for apartment residents; 24 hours a week while in school full time.

## PROJECTS

**ShouldISlab** – Is grading a trading card worth the cost? | *Node.js, Express, JavaScript* Live | GitHub | Case Study

- Combined CardHedge and GemRate API data into an expected-value model: median sale price per PSA grade weighted by real grade odds, with 95% Wilson confidence intervals.
- Tested the original price API against 4,493 graded sales on 10 cards and found 28% misfiled (wrong variant, autograph, or grade); switched to CardHedge, which measured 0.4%.
- Built an in-memory TTL cache (10 min / 6 h / 24 h by data type) to stay under a ~10 req / 35 s API limit when one result needs up to 7 calls; on HTTP 429 the server fails fast and returns Retry-After.

**ExplainMyCode** – Explains pasted code in plain English | *Node.js, Express, Anthropic API* Live | GitHub

- Built an Express backend that proxies requests to Claude so the API key never reaches the browser.
- Added per-IP rate limiting (20 requests / 15 min), input validation (400 on empty or 8,000+ character input), and CORS.

## WORK AND COMMUNITY EXPERIENCE

**Dick's Sporting Goods** – *Team Sports Associate* Sept 2025 – Feb 2026
**The Goodtimes Project** – *Volunteer Cabin Staff* (pediatric cancer camp) July 2025
**Seattle Mariners Camps** – *Youth Sports Instructor* June 2023 – Aug 2025
**Linfield University** – *Football Operations Assistant* Sept 2023 – Nov 2024
